

Safety is the Difference

Children are **curious**. They crawl, they feel, they touch, they explore. But sometimes **curiosity can lead to danger**, such as when children tamper with an electrical receptacle. Fortunately there's now a receptacle that can **safeguard this everyday source of danger**. Learn more about **Tamper Resistant Receptacles (TRRs)** and their life-saving potential.

The 2008 National Electrical Code (NEC®) **requires** all new and renovated homes to have TRRs.

100%

100% of all 2-4 year olds were **able to remove** one type of plastic outlet cap **within 10 seconds**.*

The average American home is **41** years old. Homes upgraded before the **2008 NEC** may not have TRR protection.

The shutter system in TRRs **allows only plugs** to be inserted while **preventing** access to foreign objects.

In a 10 year study, **24,000** children (7 a day) were treated in emergency rooms for receptacle-related injuries.**

Hairpins, keys and fingers are the **top three** items inserted into outlets by a child.

25¢ 25¢

TRRs cost **as little as \$0.50 more** than a standard outlet.
